

Mix Contents of Closed Drum

>> Watch the Video <<

- Use common steel drum for mixing
- No permanent container to purge between batches
- Use separate drum for each batch

Agitate your drum's contents without even opening the drum! Incorporate important stratified ingredients and eliminate sediment in the bottom of your drum. Mixing in closed drums eliminates the hazards, worker exposure, and messy cleanup associated with insertion mixers.

This compact, portable mixer and drum cradle rolls a closed drum to agitate the contents. You may also dispense directly from your drum through a faucet. The built-in tipping bar provides leverage to ease loading and unloading. The sides and back are enclosed to protect the drive.

Drum Sizes

- Roll a 6" to 28" (15.2 to 71 cm) diameter drum
- Up to 38" (97 cm) tall. Relocate wheels to accommodate various steel drum sizes.
- The tipping lever will ONLY engage a drum 30" (76.2 cm) or taller

Drum RPM

- Fixed speed models roll a 22.5" (57.2 cm) diameter drum at 20 RPM (16 RPM on 50Hz models)
- Variable speed models roll a drum from 15 to 24 RPM (13 to 20 RPM on 50Hz models)

Capacity of Wheeled Models

- Liquid load: 500 Lb. (227 kg)
- Dry load varies with drum RPM
 - 350 Lb. (159 kg) at 15 RPM
 - 300 Lb. (136 kg) at 20 RPM
 - 250 Lb. (113 kg) at 24 RPM

Maximum ambient operating temperature

- 140°F (60°C)

Improved Kick Stand

The new kick stand design is easier to deploy, and better supports the drum roller in upright position.

Dispense Directly from Drum

Drain the contents of a drum directly into a smaller container for use as needed. A closed faucet can be in place while the drum is rotated.

Improved Top Rim Hook

Engage the top rim of the drum to help in tipping it over into rolling position.

Options and Accessories

Roll a 1 to 5 Gallon Can

Add optional Idler Attachment (part # 1-5P) to extend the usefulness of your drum roller. Easily attached with 4 bolts, the spacers adjust to roll a 1 to 5 gallon (4 to 19 liter) cylindrical can. Rolls a 5-gallon can at approximately double the RPM of a 55-gallon drum. Idler Attachment is for use on wheeled drum roller only. It cannot be used with belted models.

Roll a Plastic Drum

Add option POLY-201 to roll a 55-gallon (210 liter) plastic drum. It adds extra wheels to grip the flexible drum sidewall, an end stop to prevent the drum from travelling lengthways while being rolled, and a chain to assist in loading the drum onto the roller. Adds 62 Lb. (28.1 kg) to the ship weight and requires a skid.

Simple Rock-Over Loading

The built-in tipping lever facilitates loading. Improved frame shape and lower height make loading easier. Note: The tipping lever will only engage a drum that is 30" (76.2 cm) or taller.

Improved Internal Components

Larger sprockets and roller chain for years of reliable drum rolling.

Belted Drum Rollers for Fiber Drum

Belted portable drum rollers are designed to roll a fiber drum, and can also be used for a steel drum. They have broad belts, instead of the wheels, to support your drum.

Liquid load capacity: 300 Lb. (227 kg)
Dry load capacity varies with drum RPM (see model numbers page 5).

Capacity of Belted Models

- Liquid load: 300 Lb. (136 kg)
- Dry load varies with drum RPM
 - 300 Lb. (136 kg) at 15 RPM
 - 300 Lb. (136 kg) at 20 RPM
 - 250 Lb. (114 kg) at 24 RPM

Custom Stainless Steel Portable Drum Rollers

Custom versions made of type 304 stainless steel are valuable for use in clean environments such as food and pharmaceutical companies.

Enclosures for Morse Portable Drum Rollers have a safety interlock to automatically shut off the drum roller when the gate is opened. Open the enclosure gate, place your drum onto the drum roller, then close the gate to allow operation. Connections are included for single-phase AC and for air powered models only. Customer to provide controls and connections for 3-phase AC and for explosion-proof AC models.

Install all Morse Drum Rotators in accordance with OSHA requirements for enclosure and safety interlock, etc. Drum roller automatically turns off when enclosure door is opened.

For OSHA compliance, see OSHA subpart O.1910.212(a)(4) "Barrels, containers, and drums. Revolving drums, barrels, and containers shall be guarded by an enclosure which is interlocked with the drive mechanism, so that the barrel, drum, or container cannot revolve unless the guard enclosure is in place."

Power connections and motor controls must comply with applicable codes.
